**DETAILED ACTION**

***Allowable Subject Matter***

1. Claims 1-20 are allowed.
2. The following is an examiner's statement of reasons for allowance:
  - Regarding independent claims 1 and 7, the prior art fails to disclose or make obvious a device for separating a multi-constituent material into constituents comprising: a cylindrical wall having a first end, a second end and an inner radius, surrounding a chamber and defining a longitudinal axis;
  - means for converting the multi-constituent material into a multi-species plasma in said chamber within a radius to create ions of relatively low mass to charge ratio, M1, and ions of relatively high mass to charge ratio, M2;
  - means for establishing crossed electric and magnetic fields ( $E \times B$ ) in said chamber
  - means for controlling said electric field and said magnetic field to place said ions of relatively high mass to charge ratio, M2, on trajectories into said collector, and to place said ions of relatively low mass to charge ratio, M1, on trajectories through said hollow collector.

Regarding independent claim 16, the prior art fails to disclose or make obvious a method for separating a multi-constituent material into constituents comprising providing the apparatus of claim 7 and controlling the electric and magnetic fields to place ions of

relatively high mass to charge ratio on trajectories that direct them onto the collector, and to place ions of relatively low mass to charge ratio on trajectories that allow them to pass through the hollow collector.

Claims 2-6, 8-15 and 17-20 are allowed by virtue of their dependency on claims 1, 7 and 16 respectively.

The main feature that separates the apparatus and method apart from prior art is the use of a circular collector and controlling the E X B field to allow only ions below a defined mass to charge ratio to enter the collector.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance"

#### ***Relevant Prior Art***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

US 20040077916 A1 to Gilleland et al. discloses a system and method for radioactive waste vitrification that uses a plasma mass filter to collect radioactive particles from a multi-species plasma.
